

Archive Categorization

Improve Email Retention with MessageGate® Archive Categorization

MessageGate® Archive Categorization delivers the most powerful categorization server on the market today. Through real-time analysis and easy integration with existing archive solutions, MessageGate Archive Categorization enables companies to apply consistent email archiving policies to messages before they enter the archive. MessageGate can partition messages by category, enhance retrieval capabilities through the addition of policy-related metadata, and reduce archiving costs through elimination of non-business email from the archive. By intelligently classifying and categorizing email before it gets to the archive, retention and retrieval activities become efficient and cost-effective.

Archive Categorization Benefits

- Enhanced Retrieval Capabilities
- Reduced Email Discovery & Investigation Costs
- Reduced Storage Costs
- Real-time Alerts for Breaches of Email Usage Rules
- Rapid Set-up & Return on Investment

Categorize & Classify Messages

MessageGate-enabled policies analyze all email traffic and tag each message with configurable information that intelligently classifies and categorizes e-mail volume before it gets to the archive. Messages are processed as they are received for more orderly analysis, maintenance, and deletion. The MessageGate tag is used as an additional attribute or attributes to assist in review, retrieval, and investigative activities.

Assign Retention Periods

Topics or senders/receivers requiring specialized retention periods are identified as the messages are analyzed by MessageGate, allowing a more intelligent approach to determining not only what is saved, but how long it is saved. The retention period information passes with the email message into the archive, and the archive acts on that information as necessary.

Route or Dispose of Messages

MessageGate-enabled policies determine the behavior of messages as they are sent and received. Those found to be "business as such" can be analyzed and delivered as intended. Unwanted email or email not requiring archival can be disposed of, while noncompliant mail can be intercepted for supervisory review, approval, or escalation prior to being delivered or received.

About MessageGate

MessageGate provides enterprise-class email governance solutions to leading companies world-wide. MessageGate's technology empowers companies to cope with threats, improve archival and retrieval activities, and ensure proper usage across a variety of industries. MessageGate's offerings include: MessageGate® Activity Profile (MAP), MessageGate® Policy Enforcement, MessageGate® Archive Categorization, and MessageGate® Email Filtering.
